

Stock Market Prediction by RNN on LSTM Model

Deqing Qu, Mian Xie

Background

Multi-Factor Model is a financial model that employs multiple factors to explain market phenomena and stock prices

- **Macroeconomic factors:** employment, inflation, interest
- **Fundamental factors:** Revenue, Gross Margin, Net Income, Earning Per Share (EPS),
- **Statistical factors:** Stock Price, Trading Volume

Problem Description

- Construct a Multi-Factor Model using LSTM to predict the stock price
- Generate portfolios with hedging strategy to achieve higher excess return and lower risk of volatility.

Dataset

- Stock Statistical Data from **Yahoo! Financial**
